No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                         -!- SUBUNIT: HOMOTRIMER.
-!- SUBCELLULAR LOCATION: CYTOPLASMIC DURING NORMAL GROWTH AND MOVES
TO THE NUCLEUS UPON ACTIVATION (BY SIMILARITY).
-! TISSUE SPECIFICITY: LOW EXPRESSION FOUND IN MOST TISSUES WITH THE EXCEPTION OF BLOOD AND LIVER. HIGHEST LEVELS ARE FOUND IN PIGMENTAL LAYER OF RETIRA AND IN THE LYMPHOBLASTOID CELL LINE MSB.
-!- DEVELOPMENTAL STAGE: EXPRESSED DURING DEVELOPMENT.
                                                                Nakai A., Morimoto R.I.;
"Characterization of a novel chicken heat shock transcription factor," Characterization of a novel chicken heat shock transcription factor, heat shock factor 3, suggests a new regulatory pathway.";
Mol. Cell. Biol. 13:1983-1997(1993).
- FUNCTION: DAM-BINDING PROTEIN THAT SPECIFICALLY BINDS HEAT SHOCK PROWOTER ELEMENTS (HES) MO ACTIVITY AND ACTIVITY WHE SEE UNLESS THE CELLS ARE HEAT SHOCKED OR TREATED WITH NONIONIC DETERGENTS. IT PRESENTS CONSTITUTIVE DNA BINDING ACTIVITY WHEN THE C-TERMINAL IS DELETED.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       01-0cT-1994 (Rel. 30, Created)

the extraembryonic and embryonic regions. At 8.5 dpc, weakly expressed in the future gut, allantois, yolk sace endoderm and the expressed in the future gut, allantois, yolk sace endoderm and the ectoplacental cone. At 9.5 dpc, strong expression in the primordial gut and presumptive fetal liver, in the floorplate of the myelencephalon, neural crest calls, sponglotrophoblasts, and giant cells of the placenta. At 12.5 dpc, detected in hepotocytes, in the outflow tract of the heart in a specific subset of dorsal root ganglia, in the cranial nerve ganglia, in the lung primordium, and in the epithelium of the expiratory tract. In newborn, strongly expressed in keratinocytes, in the cartilage, in bronchial epithelia, and bone membrane.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This SWISS-PROT entry is copyright. -i-FUNCTION: Interacts with the upstream promoter region of the oxytocin receptor gene. May be a transcriptional enhancer in the upstread at promoter region of the oxytocin receptor gene at parturition. Since upregulation of the oxytocin receptor gene at parturition. Since it lacks a putative transactivation domain, it may behave as a transcriptional repressor when it dimerize among himself. May also serve as a transcriptional activator by dimerizing with other (usually larger) basic-zipper proteins and recruiting them to specific DNA-binding sites. May be involved in the cellular stress
                                                                                                                                                                                                                                                                                                    SUBGUNIT: Monomer and homo- or heterodimer (By similarity).
SUBCELULIAR LOCATION: Nuclear (By similarity)
TISSUE SPECIFICITY: Highly expressed in the lung, lower expression
in the brain, thymus, liver, spleen, intestin, kidney, heart,
muscle, and ovary. Not significantly expressed in hematopoletic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Transcription regulation; DNA-binding; Repressor; Nuclear protein.

-1- FUNCTION: Interacts with the upstream promoter region of the oxytocin receptor gene. May be a transcriptional enhancer in the upregulation of the oxytocin receptor gene at parturition. Since it lacks a putative transactivation domain, it may behave as a transcriptional repressor when it dimerize among himself. May also serve as a transcriptional activator by dimerizing with other (usually larger) basic-zipper proteins and recruiting them to specific DNA-binding sites. May be involved in the cellular stress
                                                                                                                                                                                                                                                                                                                                                                                                                     - Inspendent Monomer and homo- or heterodimer.
-- SUBBUNIT: Monomer and homo- or heterodimer.
-- SUBCELLULAR LOCATION: Nuclear.
-- INDUCTION: By oxidative stress.
-- TISSUE SPECIFICITY: Expressed in the term myometrium and kidney.
-- SIMILARITY: BELONGS TO THE B2IP FAMILY. MAF SUBFAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 56,
